

NEW OR NOTEWORTHY

De-Oil-It

De-Oil-It is a chemical compound formulated to “break down all types of petroleum waste and return it back to the ecosystem.” It does this by “disarming toxic molecules in oil, making them no longer bio available.” Oily waste treated with De-Oil-It can, says the product’s literature, be safely pumped overboard—though whether this is legal or not isn’t clear. What is clear is that this is a very effective cleaner of oily bilges, fuel spills, and teak. While we didn’t have the ability to suss out what was happening on the molecular level, we tried a bottle of De-Oil-It on a greasy bilge. It didn’t take long to give that bilge a nice polish, and the resulting bilgewater did not have the oily, grimy feel one might expect after such an operation. There was simply no residue left in the bilge after applying this stuff and lightly scrubbing. In a further test, De-Oil-It turned a sludgy, oily pot of water into a relatively clear one—clear, that is, but with little blobs of purportedly harmless “dirt” floating in it. De-Oil-It is also touted as an effective teak cleaner. We tried it in that application, too, and it worked well.

The product is sold in various concentrations for various purposes, including as a boat wash, an oil and fuel-spill cleaner, and even a driveway cleaner. [www.deoilit.com](http://www.deoilit.com)

Say goodbye to stinky bilge pads and boat socks

DE-OIL-IT COMPLETELY ELIMINATES GREASE, FUEL & OIL SPILLS FROM BOAT BILGES – 100%

- Breaks down all types of petroleum waste and safely reintroduces it back into the ecosystem.
- Allows for clean, petroleum-free pump-outs back into water.
- Eliminates bilge stains and fuel related boat odors.
- Cleans bilge pumps and fuel separators.
- Eliminates explosive fumes reducing the risk of fire and explosion.
- **DE-OIL-IT** Does NOT hurt the environment. It is non toxic, non microbial, no enzymes - totally biodegradable.

Kick the slick out of it!
